

ICONS

INTELLIGENT CONNECTIVITY SYSTEM

FOR INTELLIGENT

Profitability starts with insight. Knowing the performance of your compressed air installation at each given moment allows you to make smart use of your resources. It enables you to plan maintenance interventions **proactively** and at just the right time.

Potential problems are recognized before they can pose a threat to the continuity of your production. And the analysis of compressor data over time gives you the information you need to **optimize** the efficiency of your air system. All this intelligence is available through ICONS.

ALWAYS CONNECTED

With ICONS, there is **no need for service logbooks** or even regular visits to the compressor room. A mouse click is all it takes to consult the service status of your compressor online. A link takes you directly to your compressor supplier for a service quote request. It's **fast and easy**, and it's always there when you need it.

SYSTEM SIMPLICITY

ICONS is **easy to install**. It is either factory-installed or retrofit to equipment in the field using an **all-inclusive kit**. The ICONS box is installed in the electrical cubicle and connected through Ethernet or CAN Bus depending on the controller type of the compressor.

Data are sent out via a small antenna on the compressor roof. **One device to each machine** is all it takes both for connectivity and local monitoring.

SEE THINGS COMING WITH ICONS

Dealing with surprises is not part of your core business. However, if the service requirements of your compressor are unknown, it might be running less efficiently, costing you money. And if a problem persists or gets worse, this could ultimately lead to an interruption of your production process.

ICONS gives you the proactive options to **avoid surprises and unforeseen costs**. Depending on your needs and priorities, select the level of insight you want to get from ICONS.

RIGHTIME

Always knowing the right time for service, so you can plan your resources and costs optimally while making sure your compressor keeps running efficiently. That's what RightTime accomplishes for you, with online logging and a monthly service email.

Direct access to your supplier for a quote request makes your life even easier. RightTime is our **free standard** ICONS offering.

UPTIME

In addition to the features offered by RightTime, UpTime takes **proactivity** to the next level.

Machine warnings are forwarded as email and/or text messages, enabling you to take corrective action and avoid a breakdown.

Maximum equipment uptime is what this level of ICONS is all about, with an **easy to consult** list of events and availability performance dashboard.

OPTIME

The OpTime level of ICONS is available upon request and delivers additional **insights on the energy efficiency** of your compressed air system, allowing you to make informed decisions to optimize your compressed air installation.

Care. Trust. Efficiency.

Care. Care is what service is all about: professional service by knowledgeable people, using high-quality Original Parts.

Trust. Trust is earned by delivering on our promises of reliable, uninterrupted performance and long equipment lifetime.

Efficiency. Equipment efficiency is ensured by regular maintenance. Efficiency of the service organization is how Original Parts and Service make the difference.
